Third Needs Assessment of the U.S. Fire Service OREGON

**Conducted in 2010 and Including Comparisons to
the 2001 and 2005 Needs Assessment Surveys**

October 2011

Third Needs Assessment of the U.S. Fire Service OREGON

**Conducted in 2010 and Including Comparisons to
the 2001 and 2005 Needs Assessment Surveys**

EXECUTIVE SUMMARY

This third Fire Service Needs Assessment Survey was conducted by NFPA in 2010 and follows two earlier surveys in 2001 and 2005, the latter two conducted under grants from the U.S. Fire Administration. These surveys have been linked from their inception to the USFA grant programs, including the broad spectrum grants set up under Public Law 108-767, Title XXXVI – Assistance to Firefighters, and the staffing-focused program called SAFER.

The goal has been to identify major gaps in the needs of the U.S. fire service, where needs are identified by comparing what departments have with what existing consensus standards, government regulations, and other nationally recognized guidance documents say they need to have in order to be safe and effective in conducting their many responsibilities. Once the grant programs began, targeted on many of these identified needs, a second major goal became to measure the success of the grant program in reducing these needs.

This executive summary therefore includes not only a summary of the findings of the three needs assessment surveys but also a summary of the implications of those findings for the grant programs.

Structure of the Survey and This Report

The Second and Third Fire Service Needs Assessment Survey were conducted as stratified random-sample surveys, while the First Needs Assessment Survey had been conducted as a census with partial participation. (See Appendix 1.) The NFPA used its own list of local fire departments as the mailing list and sampling frame of all fire departments in the US that report on fire incidents attended.

In all, 74 of the 325 fire departments in Oregon responded.

The content of the survey was developed by NFPA in the first survey, in collaboration with an ad hoc technical advisory group consisting of representatives of the full spectrum of national organizations and related disciplines associated with the management of fire and related hazards and risks in the U.S. The survey form was used with only a couple additions and deletions in order to maximize comparability of results and development of valid timelines.

This report is organized around four of the six groups of needs covered in the national report:

- Personnel and their capabilities, including staffing, training, certification, and wellness/fitness
- Facilities and apparatus
- Personal protective equipment, including some of what may have been categorized as firefighting equipment in the USFA grants program
- Ability to handle unusually challenging incidents, including personnel, equipment, and plans or agreements to facilitate working with others

Personnel and Their Capabilities

Here are results on the current need and the trend in need:

- 37% of all fire departments that are responsible for structural firefighting have not formally trained all their personnel involved in structural firefighting, compared to 30% in 2001 and 33% in 2005.
- 51% of all fire departments that are responsible for emergency medical service (EMS) have not formally trained all their personnel involved in EMS, compared to 43% in 2001 and 48% in 2005.
- 53% of all fire departments have no program to maintain basic firefighter fitness and health, compared to 72% in 2001 and 71% in 2005.

Personal Protective (and Possibly Firefighting) Equipment

- 36% of all fire departments do not have enough portable radios to equip all emergency responders on a shift, compared to 73% in 2001 and 65% in 2005.
- 37% of all fire departments cannot equip all firefighters on a shift with self-contained breathing apparatus (SCBA), compared to 55% in 2001 and 37% in 2005.
- 17% of all fire departments do not have enough personal alert safety system devices (PASS) to equip all emergency responders on a shift, compared to 42% in 2001 and 29% in 2005.
- 3% of all fire departments cannot provide all emergency responders with their own personal protective clothing, compared to 7% in 2001 and 4% in 2005.

Ability to Handle Unusually Challenging Incidents

The survey identified four unusually challenging incidents and asked each department

- whether they were responsible for such incidents, and if they were responsible,
- whether they could handle such incidents with local trained personnel and local specialized equipment or not; and
- whether they had written agreements or other plans in place for working with others if that was necessary.

In every survey, the percentages of departments with responsibility for such incidents and sufficient local resources to handle them have been very low. This places much more importance on the existence of plans, and specifically of written agreements, for multiple departments and other entities to work together, because it is clear that that is the kind of response that will be needed in nearly all communities.

For the largest communities, it might be reasonable to work toward local preparedness, particularly for challenging incidents with the level of severity specified in the survey – a level of severity that is well below the level of severity we have seen in some real incidents.

With those exceptions, however, the emphasis here is on the need for written agreements, which is also the one area where there has been clear progress from first to third survey.

Technical Rescue and EMS at a Structural Collapse with 50 Occupants

- In 2010, 30% of departments said they were *not* responsible for such incidents, compared to 39% in 2001 and 15% in 2005.
- 50% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 64% in 2001 and 46% in 2005.

Hazmat and EMS at an Incident Involving Chemical/Biological Agents and 10 Injuries

- In 2010, 30% of departments said they were *not* responsible for such incidents, compared to 32% in 2001 and 19% in 2005.
- 39% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 52% in 2001 and 41% in 2005.

Wildland/Urban Interface (WUI) Fire Affecting 500 Acres

- In 2010, 30% of departments said they were *not* responsible for such incidents, compared to 17% in 2001 and 15% in 2005. Note that departments were not screened for whether they had sufficient wildlands to support such a fire.
- 5% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 21% in 2001 and 13% in 2005.

Mitigation of a Major Developing Flood

- In 2010, 64% of departments said they were *not* responsible for such incidents, compared to 37% in 2001 and 31% in 2005. Note that departments were not screened for whether they had nearby bodies of water to support such a flood.
- 36% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 58% in 2001 and 36% in 2005.

Summary and Conclusions

Fire service needs are extensive across the board, and in nearly every area of need, the smaller the community protected, the greater the need.

Needs have declined to a considerable degree in a number of areas, particularly personal protective and firefighting equipment. Declines in needs have been more modest in some other important areas, such as training.

Still other areas of need, such as apparatus, have seen either limited reductions in need or no reductions at all (e.g., percent of apparatus that are old enough to presumably need replacement).

There has been little change in the ability of departments, using only local resources, to handle certain types of unusually challenging incidents, including two types of homeland security scenarios (structural collapse and chem/bio agent attack) and two types of large-scale emergency responses (a wildland/urban interface fire and a developing major flood).

However, the surveys have indicated improvement in the development of written agreements to help in the use of outside resources. This may provide the strongest base on which to build, namely, the creation of regional and national agreements to allow costs of shared resources to be shared across a much wider area while also providing a protocol for any community to respond to an unusually challenging incident that is very unlikely within the community but not so unlikely within the entire region.

Fact Sheet

Oregon Fire Service Needs Assessment

There has been substantial progress in reducing many fire department needs, although more remains to be done.

Protective Equipment and Clothing

The 2010 percentage of Oregon departments **without enough equipment to equip all personnel** (or all personnel on a shift, as appropriate) was:

- 37% for **self-contained breathing apparatus (SCBA)**, compared to 55% in 2001 and 37% in 2005;

- 3% for **personal protective clothing**, compared to 7% in 2001 and 4% in 2005; and

- 17% for **personal alert safety system devices (PASS)**, compared to 42% in 2001 and 29% in 2005;

- 36% for **portable radios**, compared to 73% in 2001 and 65% in 2005.

Training

In many fire departments, **not all involved personnel have been formally trained** in their emergency response duties. The 2010 percentage of Oregon departments in which not all involved personnel have been formally trained was:

- 37% for **structural firefighting**, compared to 30% in 2001 and 33% in 2005; and

- 51% for **emergency medical service (EMS)**, compared to 43% in 2001 and 48% in 2005.

Fitness and Health

In many fire departments, **there is no program to maintain basic firefighter fitness and health.**

The 2010 percentage of Oregon departments with no such program was:

- 53%, compared to 72% in 2001 and 71% in 2005.

Unusually Challenging Incidents

There has been little or no progress in increasing the ability of fire departments to handle **various unusually challenging incidents** with local trained personnel and specialized equipment alone:

- Provide technical rescue and EMS at a **structural collapse** involving 50 occupants; and
- Provide hazardous material response and EMS at an incident involving **chemical or biological agents** and with 10 injuries.
- **Wildland/urban interface (WUI) fire** affecting 500 acres; and
- Mitigation of a **major developing flood**.

However, there has been progress in the percentage of departments having written agreements for working with others. The 2010 percentage of Oregon departments with **no** such written agreement was:

- 50% for structural collapse, compared to 64% in 2001 and 46% in 2005;
- 39% for chemical or biological incidents, compared to 52% in 2001 and 41% in 2005;
- 5% for wildland/urban interface fires, compared to 21% in 2001 and 13% in 2005; and
- 36% for developing major flood, compared to 58% in 2001 and 36% in 2005.

Success requires more written agreements, with each participating department knowing its role, providing resources needed to play its role, and helping test the plan in simulations and rehearsals.

Stations and Apparatus

Some stations lack specific features, which are required by current standards but were not required when stations were constructed. Some stations are old enough that a variety of persistent or recurring problems are to be expected and replacement might be better and even cheaper. Some departments are using old fire apparatus.

- 35% of Oregon fire departments do not have backup power for their fire stations.
- 58% of Oregon fire departments do not have exhaust emission control for their fire stations.
- 34% of the fire stations in Oregon are over 40 years old.
- 10% of Oregon fire department engines and pumpers are at least 30 years old.

Cautions on interpretation

Trends. For some states and most needs assessment survey questions, even large changes from one survey to another will not be statistically significant. Be cautious in interpreting results as trends.

State-to-state comparisons. States where a large share of departments serve small communities will tend to have greater needs according to the measures used here than states where a small share of departments serve small communities. State-to-state comparisons must be viewed with caution, particularly if the states have very different mixes of urban and rural communities.

How rural is Oregon? The survey for Oregon was based on the following responses:

- 14 of the 31 departments protecting populations of 25,000 or more;
- 14 of the 34 departments protecting populations of 10,000 to 24,999; and
- 47 of the 260 departments protecting populations of less than 10,000.

Access the full state report, other state reports and the national reports at <http://www.nfpa.org/needsassessment>.

INTRODUCTION

The report that follows presents results based on data from US local fire departments participating in a needs assessment survey. See Appendix 1 for a more detailed discussion of the statistical methodology used.

The questionnaire principally involved multiple approaches to answering the question “what does a fire department need?”. Most of the questions were intended to determine what fire departments have, in a form that could be compared to existing standards or formulas that set out what fire departments should have. Some of the questions asked what fire departments have with respect to certain cutting-edge technologies for which no standards yet exist and no determinations of need have yet been proposed.

The questionnaire also sought to define the emergency-response tasks that fire departments considered to be within their scope. For such tasks the survey asked how far departments would have to go to obtain the resources necessary to address those tasks or an illustrative incident of that type. Clearly, if departments believe the resources they would need are only available from sources separated from them by great distance – and the associated likelihood of significant delay in attaining those resources, then there may be a need for planning, training, or arrangements for equipment that can be more quickly accessed and deployed, to assure timely and effective response.

Glossary

Here are standard definitions for some of the specialized terms used in this report:

Advanced Life Support (ALS). Functional provision of advanced airway management, including intubation, advanced cardiac monitoring, manual defibrillation, establishment and maintenance of intravenous access, and drug therapy. [from [NFPA 1710](#), *Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments*, 2001 edition.]

Basic Life Support (BLS). Functional provision of patient assessment, including basic airway management; oxygen therapy; stabilization of spinal, musculo-skeletal, soft tissue, and shock injuries; stabilization of bleeding; and stabilization and intervention for sudden illness, poisoning and heat/cold injuries, childbirth, CPR, and automatic external defibrillator (AED) capability. [from [NFPA 1710](#), *Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments*, 2001 edition.]

Emergency Medical Care. The provision of treatment to patients, including first aid, cardiopulmonary resuscitation (CPR), basic life support (EMT level), advanced life support (where there may or may not be a distinction made regarding ALS care that is or is not at the Paramedic level), and other medical procedures that occur prior to arrival at a

hospital or other health care facility. [from [NFPA 1581](#), *Standard on Fire Department Infection Control Program*, 2000 edition] In this report, reference is made to “EMS” or “emergency medical service,” which is the service of providing emergency medical care.

First Responder (EMS). Functional provision of initial assessment (i.e., airway, breathing, and circulatory systems) and basic first-aid intervention, including CPR and automatic external defibrillator (AED) capability. [from [NFPA 1710](#), *Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments*, 2001 edition.]

Hazardous Material. A substance that presents an unusual danger to persons due to properties of toxicity, chemical reactivity, or decomposition, corrosivity, explosion or detonation, etiological hazards, or similar properties. [from [NFPA 1500](#), *Standard on Fire Department Occupational Safety and Health Program*, 1997 edition.]

Structural Fire Fighting. The activities of rescue, fire suppression, and property conservation in buildings, enclosed structures, aircraft interiors, vehicles, vessels, aircraft, or like properties that are involved in a fire or emergency situation. [from [NFPA 1500](#), *Standard on Fire Department Occupational Safety and Health Program*, 1997 edition.]

Technical Rescue. The application of special knowledge, skills, and equipment to safely resolve unique and/or complex rescue situations. [from [NFPA 1670](#), *Standard on Operations and Training for Technical Rescue Incidents*, 1999 edition.]

Wildland/Urban Interface (WUI). The line, area, or zone where structures and other human development meet or intermingle with undeveloped wildland or vegetative fuels. [from [NFPA 295](#), *Standard for Wildfire Control*, 1998 edition]

SECTION 1. PERSONNEL AND THEIR CAPABILITIES

Most US fire departments are volunteer fire departments, but most of the US is protected by career firefighters. Table 1-1 provides a summary overview of fire departments in Oregon.

Adequacy of Number of Firefighters Responding

Tables 1-2 to 1-3 provide statistics on numbers of firefighters responding to fight fires under certain circumstances (e.g., as volunteer or career firefighters, to a certain type of fire or with a certain type of apparatus).

These indicators of response profiles can be compared to NFPA standards regarding the minimum complement of firefighters to permit an interior attack on a structural fire with adequate safeguards for firefighter safety. The comparisons are complicated, however, because many fire departments have both career and volunteer firefighters, while Questions 2-1 to 2-3 asked only about responses by career firefighters alone or volunteer firefighters alone.

Also, in considering the results below, keep in mind that “adequacy” is being assessed here relative to only one of the several objectives of a fire department confronted with a serious fire – the protection of the firefighters themselves from unreasonable risk of injury or death. Relative success in meeting this objective will not necessarily imply anything about the department’s ability to reliably achieve the other departmental suppression objectives, whether those are preventing conflagrations, preventing fire from involving an entire large structure, or intervening decisively before the onset of flashover in the room of fire origin.

In addition, success in meeting any of these objectives involves more than a sufficiency of personnel. Equipment of many types is also needed, as are skills and knowledge, as achieved through training and certification. Each of these areas of need is addressed in different parts of the survey.

Volunteer Firefighters

Table 1-2 provides statistics on the average number of volunteer firefighters who respond to a mid-day house fire, for only the all- or mostly-volunteer fire departments in communities under 50,000 population. Note that a “mostly-volunteer” department might respond with some career firefighters as well, and those numbers are not included in Table 1-2.

[NFPA 1720](#), *Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Volunteer Fire Departments*, calls for a minimum of 4 firefighters on-site before an interior attack on a structure fire is begun. There are difficulties in applying these

standards to Table 1-2. As noted, responding career firefighters from mostly-volunteer departments are not shown, the statistics shown are average numbers responding rather than minimum numbers responding, and the threshold number of 4 is combined with averages from 3 to 4 in the questionnaire.

Career Firefighters

Table 1-3 provides statistics for only the all- or mostly-career fire departments in communities with 10,000 or more population, on the number of career firefighters assigned to an engine or pumper. Note that a “mostly career” department might also respond with some volunteers, and those numbers are not reflected in Table 1-4. NFPA 1710, *Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments*, requires a minimum of 4 firefighters on an engine or pumper.

In 2010, the percentage of departments with fewer than 4 career firefighters assigned to an engine or pumper is 50% for departments protecting at least 25,000 population.

Extent of Training and Certification, by Type of Duty

Structural Firefighting

99% of departments say that structural firefighting is a role the department performs (see Table 1-4).

Table 1-5 asks how many of the personnel responsible for structural firefighting have received formal training. Answers were solicited in the form of: All, Most, Some, and None.

Departments that perform structural firefighting but have not formally trained all their involved personnel constituted 37% of departments that provide structural firefighting, compared to 30% in 2001 and 33% in 2005.

Figure 1-1 indicates what percentage of all departments perform structural firefighting and do not have all firefighters involved in structural firefighting formally trained, for each of the three Needs Assessment Studies.

Figure 1-1. Percent of All Departments Where Not All Firefighters Involved in Structural Firefighting Are Formally Trained for Three Studies

Emergency Medical Service

94% of departments say that emergency medical service (EMS) is a role the department performs (see Table 1-6).

Table 1-7 shows how many of the assigned personnel in departments responsible for EMS have received formal training.

Departments that perform EMS but have not formally trained all their involved personnel constituted 51% of departments that provide EMS, compared to 43% in 2001 and 48% in 2005. (See Figure 1-2.)

Figure 1-2. Percent of Departments Performing EMS for Which Not All Involved Personnel Are Formally Trained for Three Studies

Other Types of Emergency Response

89% of departments say that hazardous material response (Hazmat) is a role the department performs (see Table 1-8).

56% of departments say that technical rescue is a role the department performs (see Table 1-9).

Programs to Maintain and Protect Firefighter Health

Table 1-10 indicates whether departments have a program to maintain basic firefighter fitness and health, such as is required in [NFPA 1500](#), *Standard on Fire Department Occupational Safety and Health Program*.

53% of departments have *no* program to maintain basic firefighter fitness and health, compared to 72% in 2001 and 71% in 2005.

Figure 1-3 shows what percentage of departments have such programs, for each of the three Needs Assessment Studies.

**Figure 1-3. Percent of Departments
Without a Program to Maintain Basic Firefighter Fitness and Health
for Three Studies**

Source: NFPA 2010 Survey of the Needs of the US Fire Service

Type of department is broken into four categories. All-career departments are comprised of 100% career firefighters. Mostly-career departments are comprised of 51 to 99% career firefighters, while mostly-volunteer departments are comprised of 1 to 50% career firefighters All-volunteer departments are comprised of 100% volunteer firefighters.

The above projections are based on 74 departments reporting on Questions 1, 7 and 8. Numbers may not add to totals due to rounding.

- Q. 1: Population (number of permanent residents) your department has primary responsibility to protect (excluding mutual aid areas)
- Q. 7: Total number of full-time (career) uniformed firefighters
- Q. 8: Total number of active part-time (call or volunteer) firefighters

Table 1-2
For All- or Mostly-Volunteer Departments

Q. 18: Does your department have a program to maintain basic firefighter fitness and health (e.g., as required in NFPA 1500)?

SECTION 2. FACILITIES AND APPARATUS

Characteristics of Fire Stations Indicating Need

Table 2-1 describes the average number of fire stations per department by size of community. Note that a community may have two or more fire stations, and each fire station may have two or more firefighting companies, each attached to a particular apparatus, such as an engine/pumper.

Table 2-1 also describes the fraction of stations with characteristics that indicate potential needs, specifically age of station over 40 years, or a lack of need, such as the presence of backup power, or exhaust emission control equipment.

Apparatus

Table 2-2 characterizes the size of the engine/pumper fleet inventory, overall and by age of vehicle.

Table 2-1
Number of Fire Stations and Selected Characteristics
by Community Size
(Q. 23)

Population of Community	Average Number of Stations	Percent Stations Over 40 Years Old	Percent Stations Having Backup Power	Percent Stations Equipped for Exhaust Control
25,000 or more	6.1	21.9%	85.0%	64.5%
10,000-24,999	3.3	30.6%	69.4%	41.6%
Under 10,000	1.8	47.8%	44.0%	20.9%
Total	2.9	33.9%	65.4%	42.2%

Source: NFPA 2010 Survey of the Needs of the US Fire Service

The above projections are based on 63 departments answering all four parts of Question 23. Numbers may not add to totals due to rounding.

Q. 23: Number of fire stations, number over 40 years old, number having backup power, number equipped for exhaust emission control (e.g., diesel exhaust extraction).

Table 2-2
Average Number of Engines/Pumpers in Service
and Age of Engine/Pumper Apparatus
by Community Size
(Q. 24)

<u>Population of Community</u>	<u>Average Number of Engines</u>	<u>Engines 0-14 Years Old</u>	<u>Engines 15-19 Years Old</u>	<u>Engines 20-29 Years Old</u>	<u>Engines 30 or More Years Old</u>
25,000 or more	8.93	7.37	1.21	0.21	0.14
10,000-24,999	5.36	2.64	1.21	1.14	0.36
Under 10,000	3.38	1.38	0.48	0.88	0.64
Total	4.89	2.83	0.77	0.80	0.49

Source: NFPA 2010 Survey of the Needs of the US Fire Service

The above table breakdown is based on 70 departments answering all parts of Question 24. Numbers may not add to totals due to rounding.

Q. 24: Number of engines/pumpers in service, number 0-14 years old, number 15-19 years old, number 20-29 years old, number 30 or more years old, number unknown age.

SECTION 3. PERSONAL PROTECTIVE EQUIPMENT

Portable Radios

36% of all fire departments do not have enough portable radios to equip all emergency responders on a shift. (See Table 3-1.)

Figure 3-1 shows the shift across the years in percentage of departments where not all emergency responders on a shift have radios.

Figure 3-1. Percent of Departments Where Not All Emergency Responders on a Shift Have Portable Radios for Three Studies

Self-Contained Breathing Apparatus (SCBA)

37% of departments cannot equip all firefighters on a shift with their own self-contained breathing apparatus (SCBA). (See Table 3-2.)

Figure 3-2 shows how the percentage of departments where not all firefighters on a shift are equipped with SCBA have changed over the years.

Figure 3-2. Percent of Departments Where Not All Firefighters on a Shift Are Equipped With SCBA for Three Studies

Personal Alert Safety System (PASS) Devices

17% of departments cannot equip all emergency responders on a shift with their own personal alert safety system devices (PASS). (See Table 3-3.)

Figure 3-3 shows how the percentage of departments where not all emergency responders on a shift are equipped with PASS devices have changed over the years.

Figure 3-3. Percent of Departments Where Not All Emergency Responders on a Shift Are Equipped With PASS Devices for Three Studies

Personal Protective Clothing

3% of departments cannot provide all emergency responders with their own personal protective clothing. (See Table 3-4.)

Figure 3-4 shows how the percentage of departments where not all emergency responders have their own personal protective clothing have changed over the years.

Figure 3-4. Percent of Departments Where Not All Emergency Responders Have Their Own Personal Protective Clothing for Three Studies

Source: NFPA 2010 Survey of the Needs of the US Fire Service

The above projections are based on 75 departments reporting on Question 30a. Numbers may not add to totals due to rounding.

Q. 30a: How many of your emergency responders are equipped with personal protective clothing?

SECTION 4. ABILITY TO HANDLE UNUSUALLY CHALLENGING INCIDENTS

Questions 36-39 were designed to check the capabilities of fire departments, in communities of various sizes, to handle unusually severe and challenging incidents, whether fire departments could handle such incidents with local personnel and equipment and whether a written agreement or other plan existed for working with others to address such incidents.

Technical Rescue and EMS at Structural Collapse With 50 Occupants

30% of all departments are *not* responsible for technical rescue with EMS at a structural collapse of a building with 50 occupants, compared to 39% in 2001 and 15% in 2005.¹ (See Table 4-1.)

Tables 4-2 to 4-4 address, for the departments that consider such an incident part of their responsibility, how far they have to go for people and equipment and whether they have a written agreement or other plan to work with others on such an incident, respectively. By combining Table 4-1 with Tables 4-2 to 4-4, one can obtain combined statistics showing what percentage of departments do not have responsibility for incidents and, for departments that do have responsibility, what percentage of total departments have sufficient local resources or not, and what percentage have a written agreement for working with others or something less.

- 91% of departments responsible for this type of incident cannot handle it with local trained people alone, compared to 85% in 2001 and 95% in 2005;
- 91% of departments responsible for this type of incident cannot handle it with local specialized equipment alone, compared to 85% in 2001 and 96% in 2005; and
- **50% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 64% in 2001 and 46% in 2005.**

¹ Technical rescue is the application of special knowledge, skills, and equipment to safely resolve unique and/or complex rescue situations.

Hazmat and EMS for Incident Involving Chemical/Biological Agents and 10 Injuries

30% of departments said they are *not* responsible for hazmat response and EMS at an incident involving chemical/ biological agents and 10 injuries, compared to 32% in 2001 and 19% in 2005. (See Table 4-5.) Note that casualty counts of 100 to 1,000 are not unusual in the kind of chemical/ biological agent weapons of mass destruction considered for planning purposes.

Tables 4-6 to 4-8 address, for the departments that consider such an incident part of their responsibility, how far they have to go for people and equipment and whether they have a written agreement or other plan to work with others on such an incident, respectively. By combining Table 4-5 with Tables 4-6 to 4-8, one can obtain combined statistics showing what percentage of departments do not have responsibility for incidents and, for departments that do have responsibility, what percentage of total departments have sufficient local resources or not, and what percentage have a written agreement for working with others or something less.

- 94% of departments responsible for this type of incident cannot handle it with local trained people alone, compared to 87% in 2001 and 93% in 2005;
- 94% of departments responsible for this type of incident cannot handle it with local specialized equipment alone, compared to 88% in 2001 and 95% in 2005; and
- **39% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 52% in 2001 and 41% in 2005.**

Wildland/Urban Interface Fire Affecting 500 Acres

30% of departments said they are *not* responsible for wildland/ urban interface (WUI) fires affecting 500 acres, compared to 17% in 2001 and 15% in 2005. (See Table 4-9.) (It is not possible to determine which departments declaring such incidents outside their responsibility have no nearby wildland/urban interface areas and so have no potential for a fire of this type and size.)

Tables 4-10 to 4-12 address, for the departments that consider such an incident part of their responsibility, how far they have to go for people and equipment and whether they have a written agreement or other plan to work with others on such an incident, respectively. By combining Table 4-9 with Tables 4-10 to 4-12, one can obtain combined statistics showing what percentage of departments do not have responsibility for incidents and, for departments that do have responsibility, what percentage of total departments have sufficient local resources or not, and what percentage have a written agreement for working with others or something less.

- 72% of departments responsible for this type of incident cannot handle it with local trained people alone, compared to 73% in 2001 and 80% in 2005;

- 77% of departments responsible for this type of incident cannot handle it with local specialized equipment alone, compared to 76% in 2001 and 80% in 2005; and
- **5% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 21% in 2001 and 13% in 2005.**

Mitigation of a Developing Major Flood

64% of departments said they are *not* responsible for mitigation of developing major floods, compared to 37% in 2001 and 31% in 2005. (See Table 4-13.) It is not possible to determine from available data which departments among those declaring such incidents outside their responsibility have no nearby river, ocean shoreline, or other nearby body of water that could cause a major flood. It also is not possible to determine which departments do not have responsibility because some other local agency does, reflecting the fact that a flood is not a fire or other type of hazard requiring rapid emergency response from a fire department.

Tables 4-14 to 4-16 address, for the departments that consider such an incident part of their responsibility, how far they have to go for people and equipment and whether they have a written agreement or other plan to work with others on such an incident, respectively. By combining Table 4-13 with Tables 4-14 to 4-16, one can obtain combined statistics showing what percentage of departments do not have responsibility for incidents and, for departments that do have responsibility, what percentage of total departments have sufficient local resources or not, and what percentage have a written agreement for working with others or something less.

- 78% of departments responsible for this type of incident cannot handle it with local trained people alone, compared to 76% in 2001 and 73% in 2005;
- 95% of departments responsible for this type of incident cannot handle it with local specialized equipment alone, compared to 81% in 2001 and 81% in 2005; and
- **36% of departments responsible for this type of incident do not have written agreements to help work with others, compared to 58% in 2001 and 36% in 2005.**

Table 4-1
Is Technical Rescue and EMS for a Building
With 50 Occupants After Structural Collapse
Within the Responsibility of Department?
by Community Size
(Q. 36a)

Population of Community	Yes		No		Total	
	Number Depts	Percent	Number Depts	Percent	Number Depts	Percent

APPENDIX 1: SURVEY METHODOLOGY

Survey Methodology

The 2010 Fire Service Needs Assessment survey was conducted as a stratified random sample by size of community. A stratified sample was selected with all larger departments (protecting over 50,000 population) included, and a random sample of departments protecting smaller communities was also selected. It was estimated that a response of approximately 4,800 fire departments would be sufficient to make reliable national estimates and state estimates as long as it included a good response from larger departments.

The NFPA used its own list of local fire departments as the sampling frame of all fire departments in the U.S. In all, 26,430 fire departments were listed on the NFPA FSI*. The following table includes sample size and number of fire departments responding by community size.

In all, 4,660 fire departments, or 23% responded to the 2010 Fire Service Needs Assessment Survey. Response rates varied considerably by size of community protected, with larger communities responding at a rate of 58% to 61%, medium sized communities at a rate of 36% to 48%, and smaller communities (less than 10,000) responding at a rate of 15% to 23%. Low response rates for smaller departments (comprised mostly of volunteers) occur for a number of reasons, including lack of personnel to complete surveys.

The overall total response of 4,660 fire departments was sufficient for reliable results at the national and state levels, overall and by community size. Total national results and state results were made by summing up the weighted estimates for each stratum, and the stratification methodology adjusted for response rates by community size.

The results for Oregon presented in this report are based on 75 fire departments that responded, or 29% of the 259 departments in Oregon that were sent forms as part of the 2010 Fire Needs Assessment Survey. The number of fire departments selected and responding as well as response rates by community size can be seen in Table A-1.

Total state results in the survey report were made by summing up the weighted estimates for each stratum, and the stratification methodology adjusted for response rates by community size.

Most of the results in this report are for a percent (e.g., percent of fire departments that provide EMS services). The results in this report are based on standard statistical methodology for a stratified random sample, and it was assumed that P equals 50%.** In general for Oregon, the standard error will not exceed +/-5% for overall state results. (It will be smaller for percents close to 0 or 100%). Results for individual community size strata have larger standard errors and can be seen when there was sufficient data to calculate them in the last column in Table A-1. The standard error accounts for sampling variability but not for other issues, e.g., bias due to non-response or other non-sampling errors, e.g., incomplete reporting.

* The NFPA Fire Service Inventory (FSI) file is a listing of all known fire departments in the U.S. The file is continuously maintained by a three year cycle survey which surveys one third of the country each year. The survey is also updated by review of fire marshal listings by state, other NFPA mailings, and other data sources.

** William G. Cochran, *Sampling Techniques*, John Wiley & Sons, New York, NY, 1977.

**Table A-1—For Oregon
Number of Fire Departments Selected and
Responding by Community Size**

Population Of Community	Number of Fire Departments in Sample	Number of Fire Departments Responding	Response Rate (%)	Standard Error (+/-%)
25,000 or more	30	14	47	10
10,000 to 24,999	26	14	54	9
under 10,000	203	47	23	6
Total	259	75	29	5

The NFPA Fire Service Inventory (FSI) file is a listing of all known fire departments in the U.S. The file is continuously maintained by a three year cycle survey which surveys one third of the country each year. The survey is also updated by review of fire marshal listings by state, other NFPA mailings, and other data sources.

Most of the results in this report are for a percent (e.g., percent of fire departments that provide EMS services). The results in this report are based on standard statistical methodology for a stratified random sample, and it was assumed that P equals 50%. * In general for Oregon, the standard error will not exceed +/-5% for overall state results. (It will be smaller for percents close to 0 or 100%). Results for individual community size strata have larger standard errors and can be seen in the last column above. The standard error accounts for sampling variability but not for other issues, e.g., bias due to non-response or other non-sampling errors.

* William G. Cochran, *Sampling Techniques*, John Wiley & Sons, New York, NY, 1977.

NS- Standard errors are not provided when the number of fire departments responding is less than 5.

APPENDIX 2: SURVEY FORM

The next four pages contain the Needs Assessment Survey form.

It was printed on legal size paper (8-1/2" x 14") but has been shrunk to fit letter size paper here.

NATIONAL FIRE PROTECTION ASSOCIATION THIRD SURVEY OF THE NEEDS OF THE U.S. FIRE SERVICE

PART I. IDENTIFYING INFORMATION

Name of person completing form: _____ Date: _____

Title of person completing form: _____

Non-emergency phone number: (_____) _____ Fax: (_____) _____

E-mail address: _____

Please use enclosed postpaid envelope and return completed survey form to:

Fire Analysis and Research Division
1 Batterymarch Park
Quincy, MA 02169-7471 USA
Fax: (617) 984-7478

You can fax us the form at 617-984-7478, but please reduce it first to 8½" × 11". If you would like to fill it out electronically go to <http://www.nfpa.org/assets/files/FNSurvey2010.html> or please email us at fnsurvey@nfpa.org stating that you would like this option.

PART II. BASIC INFORMATION

1. **Population** (Number of permanent residents) your department has primary responsibility to protect (exclude mutual aid areas): _____
2. **Area** (in square miles) your department has primary responsibility to protect (exclude mutual aid areas): _____

PART III. BUDGET INFORMATION

3. **Do you have a plan for apparatus replacement on a regular schedule?** Yes No

*(Questions 4 and 5 are for all or mostly volunteer or call departments ONLY.
Indicate % for each, so percents sum to 100 for each question):*

4. **What share (%) of your budgeted revenue is from:**

_____ Fire district or other taxes _____ Payments per call _____ Other local payments _____ State government
_____ Fund raising (e.g., donations, raffles, suppers, events) _____ Other (specify): _____

5. **What share (%) of your apparatus was:**

_____ Purchased new _____ Donated new _____ Purchased used _____ Donated used
_____ Converted vehicles not designed as FD apparatus _____ Other (specify): _____

6. **Was there a change in total funded positions since 2006 in your department for all firefighters regardless of assignment?** Yes No

If yes, how many positions were: Gained _____ Lost _____

PART IV. PERSONNEL AND THEIR CAPABILITIES

7. **Total number of full-time (career) uniformed fire fighters:** _____
8. **Total number of active part-time (call or volunteer) fire fighters:** _____
9. **Average number of career/paid firefighters on duty available to respond to emergencies**
(total number for department): _____
10. **Average number of call/volunteer personnel who respond to emergencies:** _____
11. **Number of on-duty career/paid personnel assigned to an engine/pumper**
(Check one) 1 2 3 4 5+ Not applicable
12. **Number of on-duty career/paid personnel assigned to a ladder/aerial**
(Check one) 1 2 3 4 5+ Not applicable

PART IV. PERSONNEL AND THEIR CAPABILITIES (continued)

13. Structural firefighting.

- a. Is this a role your department performs? (Check one) Yes No
- b. If yes, how many of your personnel who perform this duty have received formal training (not just on-the-job)? (Check one) All Most Some None
- c. Have any of your personnel been certified to any of the following levels? (Check all that apply) A. Firefighter Level I B. Firefighter Level II

14. Emergency medical service (EMS).

- a. Is this a role your department performs? (Check one) Yes No
- b. If yes, how many of your personnel who perform this duty have received formal training (not just on-the-job)? (Check one) All Most Some None
- c. If yes to a, have any of your personnel been certified to any of the following levels? (Check all that apply) A. First responder B. Basic Life Support (BLS)/EMTIntermediate (EMTI) C. Advanced Life Support (ALS)/EMTIntermediate (EMTI) D. ALS/Paramedic

15. Hazardous materials response (Hazmat).

- a. Is this a role your department performs? (Check one) Yes No
- b. If yes, how many of your personnel who perform this duty have received formal training (not just on-the-job)? (Check one) All Most Some None
- c. If yes to a, have any of your personnel been certified to any of the following levels? (Check all that apply) A. Awareness B. Operational C. Technician

16. Wildland firefighting.

- a. Is this a role your department performs? (Check one) Yes No
- b. If yes, how many of your personnel who perform this duty have received formal training (not just on-the-job)? (Check one) All Most Some None

17. Technical rescue.

- a. Is this a role your department performs? (Check one) Yes No
- b. If yes, how many of your personnel who perform this duty have received formal training (not just on-the-job)? (Check one) All Most Some None

18. Basic firefighter fitness and health.

Does your department have a program to maintain basic firefighter fitness and health (e.g., as required in NFPA 1500)? (Check one) Yes No

19. Infectious disease control.

Does your department have a program for infectious disease control? (Check one) Yes No

PART V. FIRE PREVENTION AND CODE ENFORCEMENT

20. Which of the following programs or activities does your department conduct? (Check all that apply)

- A. Plans review
- B. Permit approval
- C. Routine testing of active systems (e.g., fire sprinkler, detection/alarm, smoke control)
- D. Free distribution of home smoke alarms
- E. Juvenile firesetter program
- F. School fire safety education program based on a national model curriculum
- G. Other prevention program (specify) _____

21. Who conducts fire code inspections in your community? (Check all that apply)

- A. Full-time fire department inspectors
- B. In-service firefighters
- C. Building department
- D. Separate inspection bureau
- E. Other (specify) _____
- F. No one

22. Who determines that a fire was deliberately set? (Check all that apply)

- A. Fire department arson investigator
- B. Regional arson task force investigator
- C. State arson investigator
- D. Incident commander or other first-in fire officer
- E. Police department
- F. Contract investigator
- G. Insurance investigator
- H. Other (specify) _____

PART VI. FACILITIES, APPARATUS, AND EQUIPMENT

23. Number of fire stations: _____

Number over 40 years old: _____ Number having backup power: _____

Number equipped for exhaust emission control (e.g., diesel exhaust extraction): _____

24. Number of engines/pumpers in service: (Numbers by age should sum to total.)

Total: _____ 0–14 years old: _____ 15–19 years old: _____

20–29 years old: _____ 30 or more years old: _____ Unknown age: _____

25. Number of ladders/aerials in service: _____

Number of buildings in community that are 4 or more stories in height:

(Check one) None 1–5 6–10 11 or more

26. Number of ambulances or other patient transport vehicles: _____

27. Portable radios.

a. How many of your emergency responders on-duty on a single shift can be equipped with portable radios?

(Check one) All Most Some None

b. How many of your portable radios are water-resistant?

(Check one) All Most Some None Don't know

c. How many of your portable radios are intrinsically safe in an explosive atmosphere?

(Check one) All Most Some None Don't know

d. Do you have reserve portable radios equal to or greater than 10% of your in-service radios?

(Check one) Yes No Don't know

28. Self-contained breathing apparatus (SCBA).

a. How many emergency responders on-duty on a single shift can be equipped with SCBA?

(Check one) All Most Some None

b. How many of your SCBA are 10 years old or older?

(Check one) All Most Some None Don't know

29. Personal alert safety system (PASS) devices.

How many of your emergency responders on-duty on a single shift are equipped with PASS devices?

(Check one) All Most Some None

30. Personal protective clothing.

a. How many of your emergency responders are equipped with personal protective clothing?

(Check one) All Most Some None

b. How much of your personal protective clothing is at least 10 years old?

(Check one) All Most Some None Don't know

c. Do you have reserve personal protective clothing sufficient to equip 10% of your emergency responders?

(Check one) Yes No Don't know

PART VII. COMMUNICATIONS AND COMMUNICATIONS EQUIPMENT

31. Multi-agency communication.

a. Can you communicate by radio on an incident scene with your federal, state, and local emergency response partners (includes frequency compatibility)? (Check one) Yes No Don't know

b. If yes, how many of your partners can you communicate with at an incident scene?

(Check one) All Most Some

32. Map coordinate system.

a. Do you have a map coordinate system you would use to help direct your emergency response partners to specific locations? (Check one) Yes No Don't know

b. If yes, what system do you use? (Check one) Local system—Map Grid/Street Address/Box Alarm Number

Based on longitude/latitude Based on Military Grid Reference System (MGRS) or US National Grid (USNG)

State Plane Coordinate System Other (specify) _____

33. Telephone communication.

Do you have 911 or similar system? (Check one) Yes, 911 basic Yes, 911 enhanced

Yes, other 3-digit system (specify) _____ No

34. Dispatch.

a. Who has primary responsibility for dispatch operations? (Check one) Fire department Police department
 Private company Combined public safety agency Other (specify) _____

b. Do you also have a backup dispatch facility? (Check one) Yes No

35. Internet access.

a. Does your department have Internet access? (Check one) Yes No

b. If yes, describe the access you have. (Check one) All personnel have individual access

One access point per station, multiple stations One access point at the only station

Access at headquarters, but there are multiple stations Other (specify) _____

PART VIII. ABILITY TO HANDLE UNUSUALLY CHALLENGING INCIDENTS

Each question is based on an example incident. We want to know whether you have enough local resources to handle such an incident, and if not, how far you would have to go to obtain sufficient resources. Both the type and the size of the incident are specified to give you something specific to react to and a challenge that will often need more than local resources.

36. Technical rescue and EMS for a building with 50 occupants after structural collapse.

- a. Is this type of incident within your department’s responsibility? (Check one) Yes No (If no, go to Question 37)
- b. If yes, how far would you have to go to obtain enough people with specialized training for this incident? (Check one) Local would be enough Regional State National
- c. If yes, how far would you have to go to obtain enough specialized equipment to handle this incident? (Check one) Local would be enough Regional State National
- d. If yes, do you have a plan for obtaining assistance from others on this type of incident? (Check one) Yes, written agreement Yes, informal Yes, other (specify) _____ No

37. Hazmat and EMS for an incident involving chemical/biological agents and 10 injuries.

- a. Is this type of incident within your department’s responsibility? (Check one) Yes No (If no, go to Question 38)
- b. If yes, how far would you have to go to obtain enough people with specialized training for this incident? (Check one) Local would be enough Regional State National
- c. If yes, how far would you have to go to obtain enough specialized equipment to handle this incident? (Check one) Local would be enough Regional State National
- d. If yes, do you have a plan for obtaining assistance from others on this type of incident? (Check one) Yes, written agreement Yes, informal Yes, other (specify) _____ No

38. Wildland/urban interface fire affecting 500 acres.

- a. Is your department likely to experience a wildland/urban interface fire affecting 500 acres? (Check one) Yes No (if no, go to question 39)
- b. If yes, how far would you have to go to obtain enough people with specialized training for this incident? (Check one) Local would be enough Regional State National
- c. If yes, how far would you have to go to obtain enough specialized equipment to handle this incident? (Check one) Local would be enough Regional State National
- d. If yes, do you have a plan for obtaining assistance from others on this type of incident? (Check one) Yes, written agreement Yes, informal Yes, other (specify) _____ No

39. Mitigation (confining, slowing, etc.) of a developing major flood.

- a. Does your department regularly prepare for a major flood in your jurisdiction that would result in extensive damage or require extensive evacuation of people? (Check one) Yes No (if no, go to question 40)
- b. If yes, how far would you have to go to obtain enough people with specialized training for this incident? (Check one) Local would be enough Regional State National
- c. If yes, how far would you have to go to obtain enough specialized equipment to handle this incident? (Check one) Local would be enough Regional State National
- d. If yes, do you have a plan for obtaining assistance from others on this type of incident? (Check one) Yes, written agreement Yes, informal Yes, other (specify) _____ No

PART IX. NEW AND EMERGING TECHNOLOGY

40. Chemical, Biological, Radiological, Nuclear (CBRN) Respirators.

How many NIOSH-certified CBRN respirators (air purifying respirator or self contained breathing apparatus/SCBA) are available for use by fire fighters in your fire department? _____ (If none, enter a “0”)

41. Thermal imaging cameras. Do you have any now or plan to acquire any?

(Check one) Now own Plan to have in 1 year Plan to have in 5 years No plan to acquire

42. Advanced personnel location equipment. Do you have any now or plan to acquire any?

(Check one) Now own Plan to have in 1 year Plan to have in 5 years No plan to acquire

43. Equipment to collect chem/bio samples for analysis elsewhere. Do you have any now or plan to acquire any?

(Check one) Now own Plan to have in 1 year Plan to have in 5 years No plan to acquire

PART X. YOUR TOP 3 NEEDS IN YOUR WORDS.

44. _____

45. _____

46. _____
