Fact Sheet
Connecticut Fire Service Needs Assessment

There has been substantial progress in reducing many fire department needs, although more remains to be done.

Protective Equipment and Clothing

The 2010 percentage of Connecticut departments without enough equipment to equip all personnel (or all personnel on a shift, as appropriate) was:

- 51% for self-contained breathing apparatus (SCBA), compared to 50% in 2001 and 39% in 2005;
- 16% for personal alert safety system devices (PASS), compared to 26% in 2001 and 20% in 2005;
- 7% for personal protective clothing, compared to 5% in 2001 and 4% in 2005; and
- 68% for portable radios, compared to 80% in 2001 and 55% in 2005.

Training

In many fire departments, not all involved personnel have been formally trained in their emergency response duties. The 2010 percentage of Connecticut departments in which not all involved personnel have been formally trained was:

- 32% for structural firefighting, compared to 45% in 2001 and 31% in 2005; and
- 41% for emergency medical service (EMS), compared to 52% in 2001 and 46% in 2005.

Fitness and Health

In many fire departments, there is no program to maintain basic firefighter fitness and health. The 2010 percentage of Connecticut departments with no such program was:
- 42%, compared to 53% in 2001 and 61% in 2005.

Unusually Challenging Incidents

There has been little or no progress in increasing the ability of fire departments to handle various unusually challenging incidents with local trained personnel and specialized equipment alone:
- Provide technical rescue and EMS at a structural collapse involving 50 occupant; and
- Provide hazardous material response and EMS at an incident involving chemical or biological agents and with 10 injuries.
- Wildland/urban interface (WUI) fire affecting 500 acres; and
- Mitigation of a major developing flood.

However, there has been progress in the percentage of departments having written agreements for working with others. The 2010 percentage of Connecticut departments with no such written agreement was:
- 66% for structural collapse, compared to 86% in 2001 and 55% in 2005;
- 55% for chemical or biological incidents, compared to 73% in 2001 and 49% in 2005;
- 81% for wildland/urban interface fires, compared to 75% in 2001 and 46% in 2005; and
- 67% for developing major flood, compared to 81% in 2001 and 53% in 2005.

Success requires more written agreements, with each participating department knowing its role, providing resources needed to play its role, and helping test the plan in simulations and rehearsals.

Cautions on interpretation

Trends. For some states and most needs assessment survey questions, even large changes from one survey to another will not be statistically significant. Be cautious in interpreting results as trends.

State-to-state comparisons. States where a large share of departments serve small communities will tend to have greater needs according to the measures used here than states where a small share of departments serve small communities. State-to-state comparisons must be viewed with caution, particularly if the states have very different mixes of urban and rural communities.

How rural is Connecticut? The survey for Connecticut was based on the following responses:
- 17 of the 35 departments protecting populations of 25,000 or more;
- 21 of the 57 departments protecting populations of 10,000 to 24,999; and
- 20 of the 162 departments protecting populations of less than 10,000.
