

**Report:**

Manufactured Home Fires  
John R. Hall, Jr.  
Fire Analysis and Research Division  
National Fire Protection Association  
September 2013

**Errata No.:** USS16, - September 2013-02

**Reference:** Page 10, 1st paragraph

Roughly one-fifth of the inventory is still of pre-standard age. Post-standard units have a roughly one-third lower fire rate per 1,000 occupied units (Table 2-1) than ~~post~~-pre-standard units and a roughly one-half lower death rate per 100 fires (Table 2-A). These relationships yield a fire death rate for post-standard units of 1.9 deaths per 100,000 occupied manufactured homes (and a pre-standard unit death rate that is more than three times the rate for post-standard units).
