Christmas Tree Safety

As you deck the halls this holiday season, be fire smart. A small fire that spreads to a Christmas tree can grow large very quickly.

PICKING THE TREE
• Choose a tree with fresh, green needles that do not fall off when touched.

PLACING THE TREE
• Before placing the tree in the stand, cut 2” from the base of the trunk.
• Make sure the tree is at least three feet away from any heat source, like fireplaces, radiators, candles, heat vents or lights.
• Make sure the tree is not blocking an exit.
• Add water to the tree stand. Be sure to add water daily.

LIGHTING THE TREE
• Use lights that have the label of a recognized testing laboratory. Some lights are only for indoor or outdoor use.
• Replace any string of lights with worn or broken cords or loose bulb connections. Read manufacturer’s instructions for number of light strands to connect.
• Never use lit candles to decorate the tree.
• Always turn off Christmas tree lights before leaving home or going to bed.

After Christmas
Get rid of the tree after Christmas or when it is dry. Dried-out trees are a fire danger and should not be left in the home or garage, or placed outside against the home.

Check with your local community to find a recycling program.

Bring outdoor electrical lights inside after the holidays to prevent hazards and make them last longer.

FACTS

⚠️ One of every three home Christmas tree fires is caused by electrical problems.

⚠️ Although Christmas tree fires are not common, when they do occur, they are more likely to be serious.

⚠️ A heat source too close to the tree causes roughly one in every four of the fires.
