Enclosure 4.A.

NFPA Document No: NFPA 101 2000 Edition:

**Code Language: 19.3.6.2.3** In smoke compartments protected throughout by an approved, supervised automatic sprinkler system in accordance with 19.3.5.3, a corridor shall be permitted to be separated from all other areas by non-fire-rated partitions and shall be permitted to terminate at the ceiling where the ceiling is constructed to limit the transfer of smoke.

A.19.3.6.2.3 An architectural, exposed, suspended-grid acoustical tile ceiling with penetrating items such as sprinkler piping and sprinklers; ducted HVAC supply and return-air diffusers; speakers; and recessed lighting fixtures is capable of limiting the transfer of smoke.

Did this question arise from an actual field situation? Yes

Please state your business interest in the matter and identify other parties involved: This question continues to surface with state officials interpreting the Life Safety Code for CMS.

**Question:** Is it the intent of the LSC to require the architectural suspended-grid ceiling to have the acoustical ceiling tiles clipped in place or of a specific weight (e.g. one pound per square foot) to meet the requirements of paragraph 19.3.6.2.3?

**HITF Response:** NO.

Enclosure 4.C.

**Code Language: 7.2.1.6.1 Delayed-Egress Locks.**
Approved, listed, delayed-egress locks shall be permitted to be installed on doors serving low and ordinary hazard contents in buildings protected throughout by an approved, supervised automatic fire detection system in accordance with Section 9.6, or an
Enclosures 4A and 4C

approved, supervised automatic sprinkler system in accordance with Section 9.7, and where permitted in Chapters 12 through 42, provided that the following criteria are met.

(a) The doors shall unlock upon actuation of an approved, supervised automatic sprinkler system in accordance with Section 9.7 or upon the actuation of any heat detector or activation of not more than two smoke detectors of an approved, supervised automatic fire detection system in accordance with Section 9.6.

18.2.2.2.4
Doors within a required means of egress shall not be equipped with a latch or lock that requires the use of a tool or key from the egress side.

Exception No. 2*: Delayed-egress locks complying with 7.2.1.6.1 shall be permitted, provided that not more than one such device is located in any egress path.

19.2.2.2.4
Doors within a required means of egress shall not be equipped with a latch or lock that requires the use of a tool or key from the egress side.

Exception No. 2*: Delayed-egress locks complying with 7.2.1.6.1 shall be permitted, provided that not more than one such device is located in any egress path.

Did this question arise from an actual field situation? Yes

Please state your business interest in the matter and identify other parties involved:
Healthcare facilities are being cited for a deficiency if the delayed-egress locks do not automatically unlock upon manual activation of the fire alarm system. Not only are the facilities being cited for a deficiency, but they are also being cited for having immediate jeopardy resulting in endangering the lives of many patients. The immediate jeopardy claim results in heavy financial penalties.

Question: Do Sections 18 & 19.2.2.2.4 Exception No. 2 or Section 7.2.1.6.1 of the 2000 Life Safety Code require delayed-egress locks installed on doors in the means of egress to automatically unlock upon manual activation of the fire alarm system?

HITF Response: NO.
